PROFESSIONAL SUMMARY

Frontend Developer with 3+ years of experience building responsive, production-grade web applications using React.js, Next.js, TypeScript, and JavaScript (ES6+). Experienced in component-driven UI development, state management with Redux Toolkit, Zustand and React Query, REST API and WebSocket integration, authentication (JWT, OTP, SSO), and payment gateway integration. Sole frontend developer on an AI multi-agent product serving 1,000+ users, owning end-to-end delivery from Figma to production, plus 30+ enterprise admin modules with role-based access control. Strong in reusable component libraries, cross-browser responsive design, and web accessibility.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3
Frameworks & Libraries: React.js, Next.js (App Router, SSR, Server Actions), React Hooks, Tailwind CSS, Material UI, Node.js
State & Forms: Redux Toolkit, Zustand, React Query (TanStack Query), Context API, React Hook Form, Yup
APIs & Integrations: REST APIs, Axios, WebSockets, Real-time streaming responses, JWT authentication, OTP login, QR-based SSO, Firebase Cloud Messaging, Web Push & Service Workers, RTC SDK (audio/video calling), Razorpay payment gateway
UI & UX: Responsive design, Mobile-first layouts, Reusable component libraries, Light/Dark theming, Web accessibility (keyboard navigation, reduced motion), Cross-browser compatibility, Figma to code, Role-based access control (RBAC), Protected routes
Testing & Tools: Node.js test runner, Automated regression testing, API contract testing, Git, GitHub, Vite, Postman, Chrome DevTools, npm, VS Code

PROFESSIONAL EXPERIENCE

Frontend Developer | My Hub Technologies | Hyderabad, India

Jun 2025 – Present | Key Project: Aavtor AI – Multi-Agent AI Marketplace (aavtor.ai)

- **Sole frontend developer** for an AI multi-agent marketplace serving **1,000+ active users**, owning end-to-end delivery from Figma designs to production releases using **Next.js, React.js, TypeScript, and Zustand**.
- Built real-time streaming AI chat with rich Markdown and code-block rendering, document upload flows, and image-generation status tracking.
- Implemented **real-time WebSocket messaging** with read receipts, heartbeats, automatic reconnection, and stale-socket guards, improving chat reliability across unstable network conditions.
- Integrated an **RTC SDK** for in-app audio/video calling with call controls and live call-history updates.
- Built secure authentication with **phone OTP and QR-based SSO login** and centralized token refresh; added **Next.js server actions** to validate conversation access and keep partner credentials server-side.
- Implemented **Firebase Cloud Messaging web push notifications** with service workers and device-token registration, plus notification-driven data refreshes guarded against outdated API responses.
- Integrated **Razorpay subscription checkout** and payment-verification APIs, with plan-usage and billing-history interfaces.
- Developed responsive landing, login, and chat interfaces with **light/dark themes**, keyboard-accessible navigation, and reduced-motion support for improved accessibility.
- Delivered **30+ CRUD modules for enterprise admin applications** using a reusable table, form, and modal component library that cut new-module build time, with **role-based access control** and protected routes via **Redux Toolkit, React Query, and Axios**.
- Added **automated regression tests** for WebSocket lifecycle, notification handling, and API contracts using Node.js test utilities, reducing recurring production defects.

Junior Software Developer | Yenmin Communications

Apr 2023 – Mar 2025

- Built enterprise React.js screens with dynamic tables, filters, forms, and nested routing using reusable, hooks-based components.
- Implemented **Redux Toolkit** state management, **Axios interceptors** for token handling and centralized error handling, and **Yup** schema-based form validation.
- Translated **Figma** designs into pixel-accurate, responsive **Tailwind CSS** layouts across desktop, tablet, and mobile viewports.
- Collaborated with backend and QA teams on debugging, regression testing, and release support for stable production releases.

KEY PROJECTS

- **AmogaPay** (Next.js, React.js): Implemented OTP and JWT-based login, form validation, and reusable page layouts for a payments web application.
- **FI Deal** (React.js, REST APIs): Built CRUD screens with debounced search, filters, server-side pagination, and confirmation dialogs.

EDUCATION

Master of Science (M.Sc.), Statistics – Osmania University, Hyderabad | 2022
Bachelor of Science (B.Sc.), Mathematics, Statistics and Computer Science – Kakatiya University | 2017
